Here at SEA LIFE[®] Aquarium at LEGOLAND[®] California Resort we love the oceans and the amazing creatures that live in them. By sharing their beauty with you we hope that you'll join us in helping protect them for generations to come.

PROTECTING SHARKS

Research and tracking is vital to the protection of Leopard Sharks and Great White Sharks. We work in close partnership with researchers throughout California to learn more about these vulnerable species.

RESCUING **SEA TURTLES**

Our turtle rescue centers around the world rescue sick and injured turtles. Once we've helped them make a full recovery they are released back into the wild, or for those too unwell to return we find a suitable new home.

BREEDING VULNERABLE SPECIES

Breeding programs are an essential part of protecting our marine heritage. We run the largest and most successful seahorse breeding program in the world.

You can find out more about other projects that SEA LIFE and our charity the SEA LIFE Marine Conservation Trust support during your visit.
